6100C10mm Champagne

Installation

The Floating Floor Box Edge is the most widely used trim and is ideal for areas where flooring is joining carpet, ceramic tiles (at the same height), window frames, sliding door tracks and walls . This trim should be adhered to the floor with a permanent construction adhesive. Box Edging, skirting or scotia over expansion gaps, should be fasten to the wall only, never to the flooring itself. Fill the expansion gaps with an elastic filler in places where profiles or skirtings cannot be placed. Is suitable for use in both domestic and commercial applications. The timber or laminate is designed to sit just under the outside lip of the trim, leaving room for expansion inside the channel.

Maintenance

A regular scheduled maintenance programme prevents build-up of dirt and grease, which will reduce properties of and detract from the overall appearance of the product. Brush down the profiles using a soft bristled brush.

With clean warm water, apply a small amount of a soap-less detergent to a wet green scotch pad and gently clean the surface of the profile along it's width with fresh, clean water and dry with a dry lint free cloth.
